

iUTAH Data Management Update

Amber Spackman Jones

Jeffery S. Horsburgh

iUTAH Summer Symposium

7-17-2015

Information Entropy

Example of the normal degradation in information content associated with data and metadata over time ("information entropy").

Michener, W.K. (2006). Meta-information concepts for ecological data management, *Ecological Informatics*, 1(1), 3-7, <http://dx.doi.org/10.1016/j.ecoinf.2005.08.004>.

Information Entropy

“Do not underestimate your ability to forget details about a study!”

Borer, E.T., Seabloom, E.W., Jones, M.B., Schildhauer, M. (2009). Some simple guidelines for effective data management. Bulletin of the Ecological Society of America 90:205-214. [dx.doi.org/10.1890/0012-9623-90.2.205](https://doi.org/10.1890/0012-9623-90.2.205)

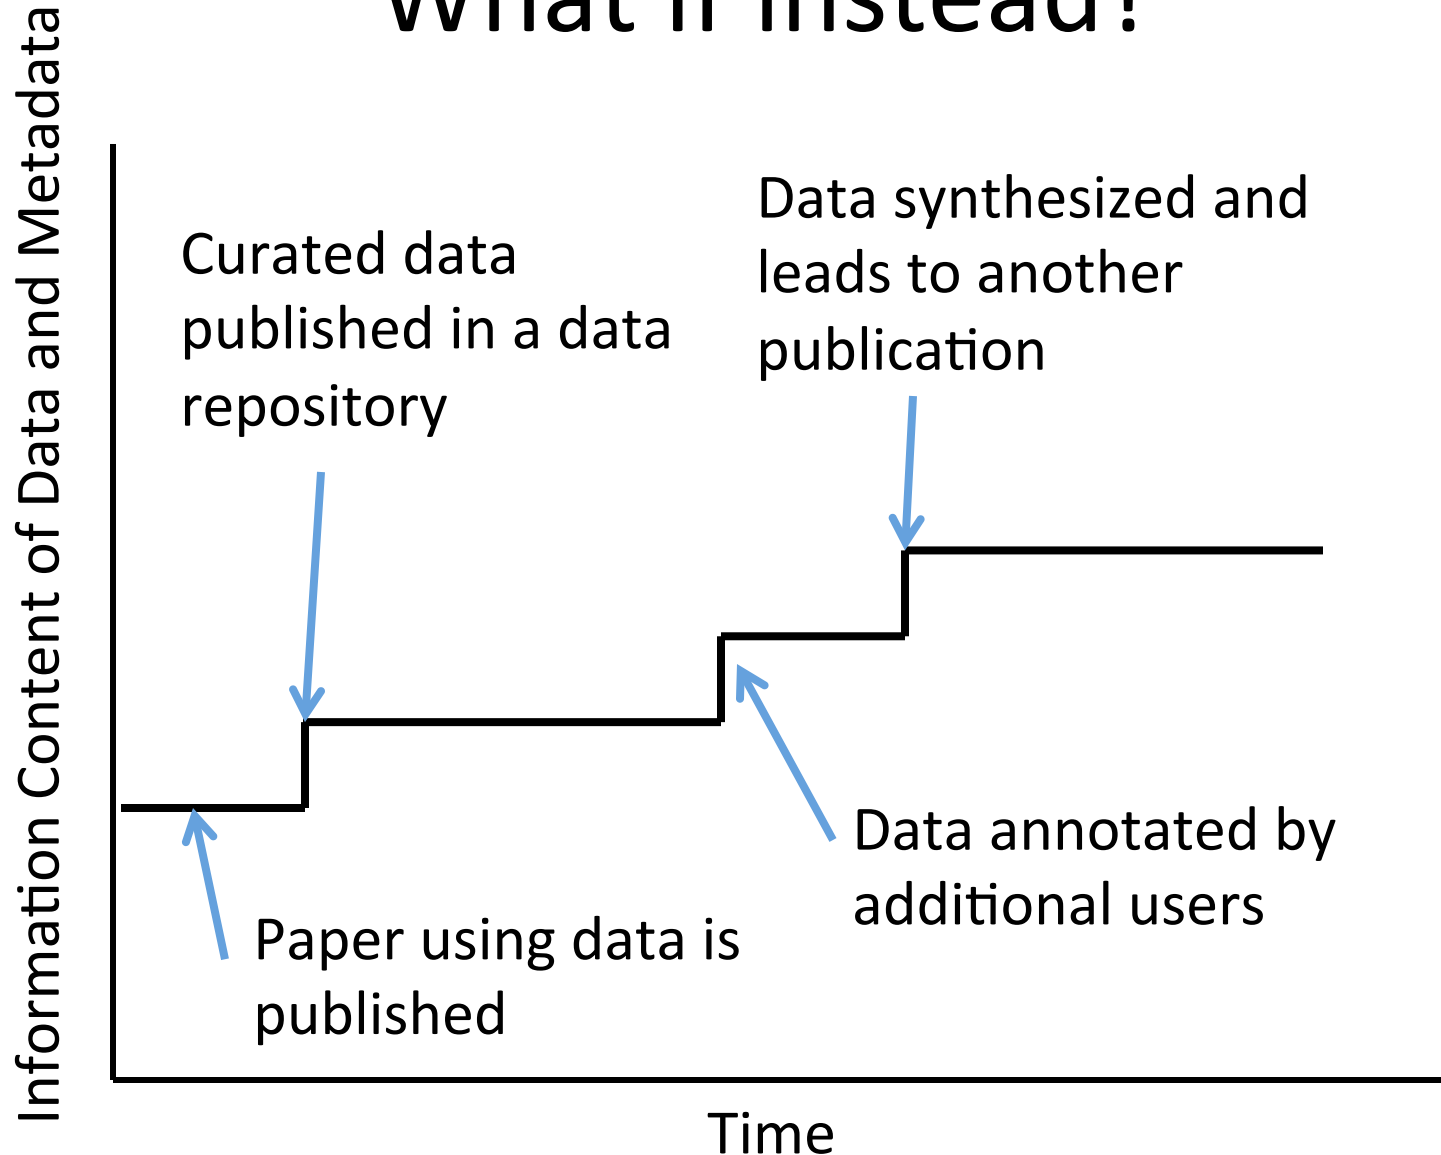

“If the information on an observation is lost, it is lost forever because it is almost impossible to measure the observation again in the original context.”

Specht, A., Guru, S., Houghton, L., Keniger, L., Driver, P., Ritchie, E.G., Lai, K., Treloar, A. (2015). Data management challenges in analysis and synthesis in the ecosystem sciences. Science of the Total Environment. [Dx.doi.org/10.1016/j.scitotenv.2015.03.092](https://doi.org/10.1016/j.scitotenv.2015.03.092)

If the rewards of the data deluge are to be reaped, then researchers who produce those data must share them, and do so in such a way that the data are interpretable and reusable by others.

Borgman, C.L. (2012). The conundrum of sharing research data. Journal of the American Society for Information Science and Technology 63(6): 1059-1078. [dx.doi.org/10.1002/asi.22634](https://doi.org/10.1002/asi.22634)

What if instead?

iUTAH Data Policy

- **Applies to all datasets created or developed with support from iUTAH**
- Recommended reading for all investigators. Available at:
http://iutahepscor.org/resources/documents/iUTAH_Data_Policy.pdf
- In general, **open data policy** to maximize the impact and broad use of datasets collected by iUTAH research teams
- Researchers should have expectation of **first rights** to analyze and publish data
- Researchers expected to provide **high quality datasets** with sufficient metadata
- Data products should to be **considered at outset** of data collection

Research Data Policy

Version 1.3

June 11, 2014

Edited by:

Jeffery S. Horsburgh and Amber S. Jones

iUTAH Data Policy: Data Typology

Timeframes

A. Primary iUTAH datasets and research products (e.g., raw and QAQC sensor data, baseline sampling datasets, general iUTAH datasets for the iUTAH community).

Published as soon as results are created

B. Support from iUTAH provided, but created by a specific investigator or group to support particular research question/goal.

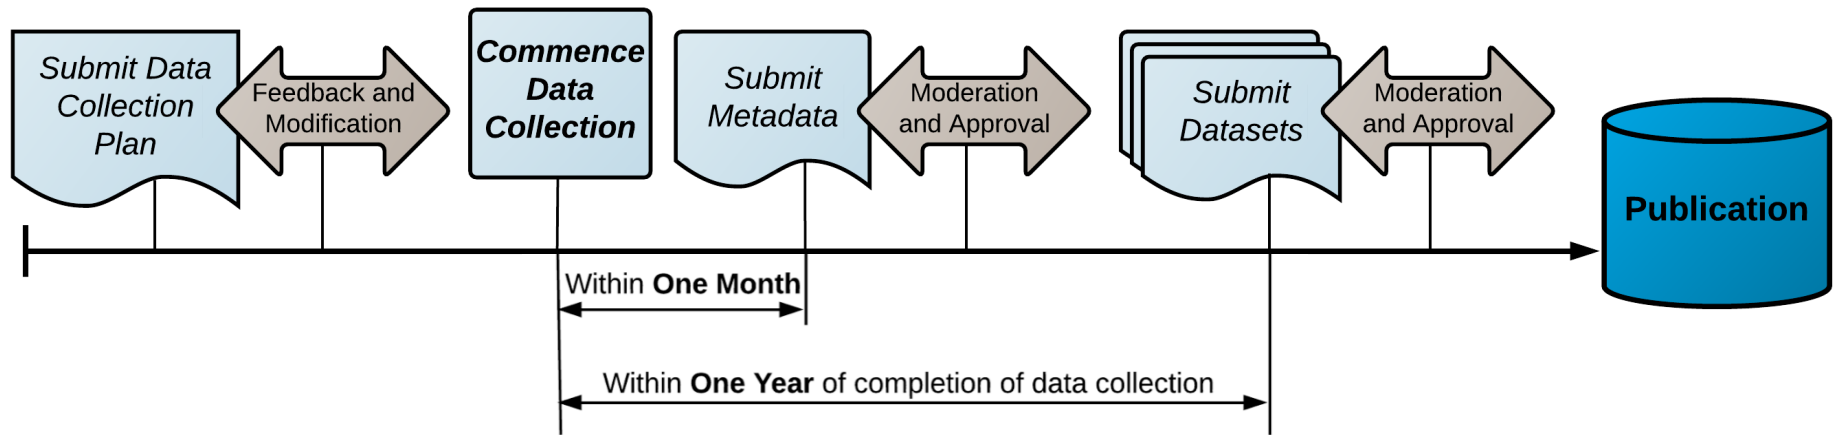

Finalized data submitted within one year of completion of data collection activities

C. Types A and B but subject to IRB restrictions.

Same timeframes as A and B, but may require anonymization

D. Proprietary data that may be subject to licensing, copyright, other restrictions.

Data Publication Process

Publication:

- Assigns a citation and a URL
- Data and metadata are discoverable
- Datasets are archived and curated

iUTAH Data Policy: Data Collection Plans

- **ALL** data creation efforts with **ANY** funding from iUTAH (salary, travel, sampling, equipment, etc.) **MUST** submit a brief plan to the Data Policy Committee **PRIOR** to funding.
- Plan should include:
 1. Identification of types of data to be collected/created
 2. Brief description of methods, data formats, and data products
 3. Timeline for data generation and expected publication
 4. Identification of who will have access to preliminary data during collection
 5. Identification of limits to access
 6. Information on collaborators/co-authors of data products or publications

Data Publication System

<http://repository.iutahepscor.org>

- Web-based system for iUTAH researchers to submit and publish data and models.
- System supports **curation** of datasets.
- **Integrates** the submission and presentation of data and metadata.
- Supports **discovery and access** of datasets to a wide audience.
- Supports **storage and archival**.
- Datasets are private until **approved** by a moderator.

The screenshot shows the 'Create Dataset' form in the iUTAH Modeling and Data Federation system. The form is divided into several sections:

- What are datasets?**: A sidebar note explaining that datasets are used to group related pieces of data and can be found under a single URL with a description and licensing information.
- Create dataset**: The main form area, which includes:
 - Title**: A text field with the example 'eg. Red Butte Creek GAMUT Water Temperature Data.' and a URL field with the example 'URL: iutah-ckan-stage.uwrl.usu.edu/dataset/<dataset>' and an 'Edit' button.
 - Description**: A text area with the example 'eg. A short description (or abstract) for the dataset.' and a note 'You can use Markdown formatting here'.
 - Keywords**: A text field with the example 'eg. water quality, temperature, Red Butte Creek, time series'.
 - Organization**: A dropdown menu with 'iutah' selected.
 - Visibility**: A dropdown menu with 'Private' selected, and a link 'Why is my dataset private?'.
 - Language**: A dropdown menu with 'e.g., en, es, fr' selected.
 - Access Information**: A text area with the example 'e.g., limited to iUTAH participants, limited to IRB researchers' and a note 'You can use Markdown formatting here'.
 - Type**: A dropdown menu with 'collection' selected.
- Optional Metadata**: A section with fields for:
 - Purpose**: A text field with the example 'e.g., Educational, Research, Regulatory'.
 - Required Software**: A text field with the example 'e.g., ArcGIS, R, specific model application'.
 - Research Focus Area**: A dropdown menu.
- Spatial Metadata**: A section with fields for:
 - Spatial Coverage**: A text field with the example 'e.g., Salt Lake County'.
 - iUtah Study Area**: A dropdown menu.

Data Publication System

<http://repository.iutahepscor.org>

- Organized into **datasets**. Each dataset consists of multiple resources.
- Supports submission of **metadata-only** record.
- **General level metadata**. More specific metadata may be submitted as a resource.
- Metadata records submitted to **provide insight** into what work iUTAH participants are conducting.

The screenshot shows the 'Create Dataset' form in the iUTAH Modeling and Data Federation system. The form is divided into several sections:

- What are datasets?**: A sidebar note explaining that datasets are used to group related pieces of data and can be found under a single URL with a description and licensing information.
- Create dataset**: The main form area, which includes:
 - Title**: A text field with the example 'eg. Red Butte Creek GAMUT Water Temperature Data.' and a URL field with the example 'URL: iutah-ckan-stage.uwrl.usu.edu/dataset/<dataset>' and an 'Edit' button.
 - Description**: A text area with the example 'eg. A short description (or abstract) for the dataset.' and a note 'You can use Markdown formatting here'.
 - Keywords**: A text field with the example 'eg. water quality, temperature, Red Butte Creek, time series'.
 - Organization**: A dropdown menu with 'iutah' selected.
 - Visibility**: A dropdown menu with 'Private' selected, and a link 'Why is my dataset private?'.

Data Publication Tutorials

http://iutahepscor.org/data_modeling.shtml

http://data.iutahepscor.org/mdf/About/Training_Materials/

- Developed short videos to provide training on aspects of data publication.
- Four videos:
 - Overview
 - Data Collection Plans
 - Data Publication System: Search and Discovery
 - Data Publication System: Submittal and Publication

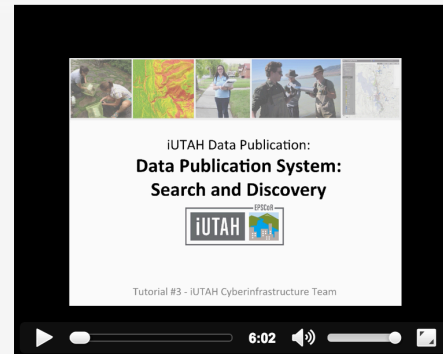

Data Publication Tutorials

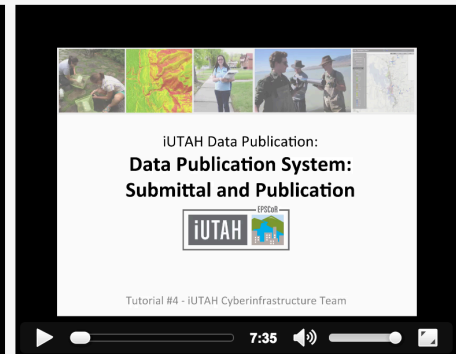

Data Publication Overview
Learn about the process for data publication within iUTAH. The goal for data publication in iUTAH is to combat information entropy and increase the information content for data.

Data Collection Plans
This tutorial focuses on Data Collection Plans. Data collection plans are the first step in the data publication process. Learn about the Data Collection Plan template and how to fill it out.

Data Publication System: Search & Discovery
This tutorial describes the Data Publication System and demonstrates how to use it to search for, discover and access data sets.

Data Publication System: Submittal & Publication
This tutorial demonstrates how to submit metadata and data to the iUTAH Data Publication System.

Data Submission Best Practices

Use Descriptive File Names

- Use only plain ASCII characters
- Brief, but descriptive of content
- Include a “readme” file when using many files

Archive Data in Non-Proprietary Formats

- Microsoft Excel is widely available and used now, but what about in 10 years? 20 years?
- How many other software programs can open your data?
- Will your data disappear if the file format/software become obsolete?

Data Submission Best Practices

What format to use?

- Store it in a file format that can be used by many different software programs
 - Text files – e.g., comma separated values (CSV) for tabular data
- Use a standard file format accepted by your scientific community
- Consider both format and syntax (e.g., the structure within the file)

Energy Balance of an Isolated Urban Tree

This dataset contains energy-related measurements in and around a relatively isolated urban tree on the University of Utah campus. Several measurements techniques are used to describe the spatial distribution of surface temperature, and fluxes of sensible heat, latent heat, radiation, and moisture. The tree is a Freeman

-----
Tower Data Tables
-----
Data table files prepended with 'Tower' correspond to measurements taken on the sonic tower. Each file corresponds to a different day of the year. The tower was located at coordinate position (9.10 m, 6.65 m, 0).

Sampling Rate: 20 Hz

Equipment:
1. CSAT3: Campbell Scientific CSAT3 three-dimensional sonic anemometer. Measurements taken at heights of 1.5m, 4.0m, 7m, 10m. Manual: https://s.campbellsci.com/documents/us/manuals/csats3.pdf
2. EC150: Campbell Scientific EC150 open-path gas analyzer. Measurements taken at 4m (co-located with CSAT3). Manual: http://s.campbellsci.com/documents/us/manuals/ec150.pdf
3. thermocouple: Omega engineering type-E finewire thermocouples.
4. KH20: Campbell Scientific KH20 krypton hygrometer. Measurements taken at 4m (co-located with CSAT3). Manual: https://s.campbellsci.com/documents/us/manuals/kh20.pdf

Data Table:
Column titles in the data table are listed below along with an explanation of the value
1. year
2. day of year: Julian day of year (Jan 1 = 1, etc.)
3. time: hour and minute of measurement (local time, MDT)
4. seconds: second of measurement
5. KH20 H2O: water vapor concentration from KH20 (grams H2O per meter^3 air)
6. KH20 mV: raw KH20 voltage reading (millivolts)
7,12,17,22. x-wind @ XXm: wind speed from CSAT3 at heights of 1.5m, 4.0m, 7m, 10m in x-dir +North (meters/second)
8,13,18,23. y-wind @ XXm: wind speed from CSAT3 at heights of 1.5m, 4.0m, 7m, 10m in y-dir +East (meters/second)
9,14,19,24. z-wind @ XXm: wind speed from CSAT3 at heights of 1.5m, 4.0m, 7m, 10m in z-dir +up (meters/second)
10,15,20,25. sonic temp @ XXm: air temperature measured by CSAT3 at heights of 1.5m, 4.0m, 7m, 10m (degrees Celsius)
11,16,21,26. sonic diagnostic @ XXm: diagnostic flag from CSAT3 at heights of 1.5m, 4.0m, 7m, 10m
27. CO2 @ 4m: air CO2 concentration measured by EC150 at a height of 4m (milligrams CO2 per meter^3 air)
28. H2O @ 4m: air H2O concentration measured by EC150 at a height of 4m (grams H2O per meter^3 air)
29. gas diagnostic @ 4m: diagnostic flag from EC150 at a height of 4m
30. EC150 temp @ 4m: air temperature measured by EC150 at a height of 4m (degrees Celsius)
31. EC150 pressure @ 4m: air pressure measured by EC150 at a height of 4m (kilopascals)
32. CO2 signal @ 4m: EC150 CO2 signal strength at a height of 4m
33. H2O signal @ 4m: EC150 H2O signal strength at a height of 4m
34,35,36,37. air temp @ XXm: air temperature from finewire thermocouples at heights of 1.5m, 4.0m, 7m, 10m (degrees Celsius)

Biofilm response to nutrient enrichment in urbanizing streams: nutrient diffusing substrate bioassay

This dataset contains the results of a nutrient limitation study conducted in the Logan River, the Middle P River, Red Butte Creek and the Jordan River. We measured the response of stream biofilms to nitrogen and phosphorus enrichment with nutrient diffusing substrates. Biofilm response was measured as chlorophyll ash-free dry mass. The mean, standard deviation, and sample size of biofilm responses to nutrient enrichment treatments are included in this dataset. The dataset also includes the concentration of total nitrogen, total phosphorus, NH4-N, NO3-N, and SRP in stream water samples collected from each site.

Survey of Stormwater Managers in Utah

This is a final report that summarizes the findings of a survey of stormwater managers in Utah conducted by Andrea Armstrong (Sociology, USU) in partnership with the Utah Stormwater Advisory Committee (USWAC). The final report includes an overview of methods, descriptive findings, and an executive summary.

The purpose of this effort was to collect statewide data, in partnership with the Utah Storm Water Advisory Committee, on stormwater managers attitudes, perceptions, and behaviors surrounding various aspects of stormwater management, including condition updates, use of low impact development infrastructure, monitoring activities, water quality condition perceptions, changes in landscape and climate patterns, partnerships with irrigation organizations, information uses, program challenges, important dimensions of program activities, and water quality monitoring activities.

This data file contains the results of an experiment conducted in the Logan River, Red Butte Creek, and the Middle Provo River between July and November 2014. We measured biofilm response (as chlorophyll a and ash-free dry mass) to nitrogen and phosphorus enrichment treatments in nutrient diffusing substrates. The file also contains the concentration of nitrogen and phosphorus in stream water at each site.

Utah Board of Water Resources Database

This dataset consists of information on water infrastructure projects that were funded by the Utah Resources within the Division of Water Resources, between March 1998 and June 2013. The data three types of files: 1) pdf files of the publically available Board of Water Resources reports, which proposed and funded projects; 2) an Access database, in which researchers at Utah State Univer reports across 341 variables; and 3) a geospatial database within which select infrastructure projects are digitized and spatially referenced. The geodatabase consists of line and point shapefiles, which portion of the irrigation and municipal infrastructure projects financially supported by the Utah I

Data were compiled from the "board folders," or summary reports of the Utah Board of Water Resources USU researchers developed a codebook (see the Access Database Variable Names document) to coding and categorization of information within board folders. Based on the coded information, selected for digitization and creation of a shapefile (located within the geodatabase). Projects we using the National Hydrography Dataset and aerial imagery that corresponded with the time of p implementation.

Logan River discharge, temperature, and conductivity dataset

This dataset was created with an older metadata schema. It needs to be updated before any of its resources can be accessed.

This dataset will contain discharge, temperature, and conductivity observations collected longitudinally along the Logan River. Data was collected at approximately 38 sites intermittently dispersed from the Mendon Road Aquatic Station to the Tony Grove Aquatic Station, including tributaries. Periodic data collection began in June of 2014 and is anticipated to continue through the spring of 2016. Measurements will potentially be made at each of the sites to capture pre/post snowmelt, summer (high ET), fall (low ET), and winter (Low ET) conditions. Discharge was measured using a SonTek Flow Tracker (velocity-area method). Temperature and conductivity were measured at each discharge site using the YSI 600 OMS. GPS coordinates for each discharge site were recorded using a Garmin® GPSMAP 64. The purpose for these measurements is to determine areas of significant groundwater-surface water interaction.
